<sup>1</sup> The EPA requires petroleum and natural gas facilities to report under the Greenhouse Gas Reporting Program (GHGRP). The GHGRP requires the reporting of methane (CH<sub>4</sub>), carbon dioxide (CO<sub>2</sub>) and nitrous oxide (N<sub>2</sub>O) emissions resulting from venting, flaring and combustion associated with oil and gas operating equipment. The GHGRP, however, does not account for all emissions from petroleum and natural gas systems. For example, companies are only required to report basin operations with total annual emissions from all GHGRP defined sources in excess of 25,000 metric tons of CO<sub>2</sub> equivalent (mtons CO<sub>2</sub>e) within defined geographic areas

<sup>2</sup> Includes full year Resolute Energy Corporation emissions/flaring in 2019.

<sup>3</sup> Trinity Consultants was hired by Cimarex to verify Cimarex's Scope 1 GHG emissions for Calendar Years 2019 and 2020 (new). Based on Trinity's evaluation, no material discrepancies were identified that would indicate that the activity and energy data, emissions calculations, and equations supporting the company's GHG emissions statement, as disclosed on Cimarex's website as of the date of this opinion, are not represented fairly in accordance with the established protocols. Trinity has concluded that Cimarex has implemented sufficient processes and controls for the collection and analysis of data used to determine reported Scope 1 emissions. Trinity Consultants has assigned Limited Assurance to Cimarex's 2019 and 2020 (new) Scope 1 GHG Emissions.

<sup>4</sup> In accordance with the U.S. Geological Survey, fresh water is defined as water that has less than or equal to 1,000 mg/l total dissolved solids.

<sup>5</sup> Includes full year Resolute Energy Corporation production in 2019.
